85 CM - PART NO. 401060
105 CM - PART NO. 401125

WIDE AXLE BEAM - INFO

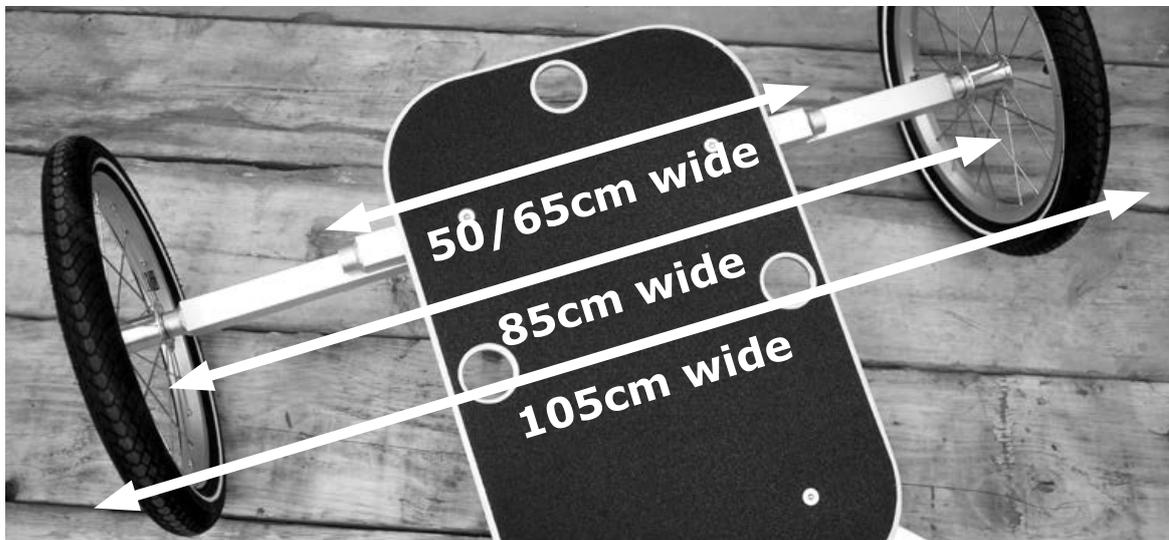

The Wide Axle Beam increases the width of your Carry Freedom Y-Frame trailer to either 85 cm or 105 cm between the wheels. Best results can be had on a Y large, but it will fit to a Y small.

This is useful for carrying wide objects like kayaks and canoes.

The Wide Axle Beam bolts on, below the existing axle beam, so the change of width is reversible.

The Wide Axle Beam fits all trailers since 2003. Trailers built before 2010 will need spacers on the trailers quick release axle to match their length to the new axle sleeves. We are happy to provide these. A few M12 washers also work well.

TO ATTACH

You will need a 13mm Spanner and 5mm Allan key.

Completely remove the two countersunk bolts that hold the load bed onto the axle beam.

Replace these bolts with the two longer bolts supplied with the 105cm Axle Beam.

Fit the new axle beam below the existing trailer chassis and bolt it in place.

Fit the wheels to the new axle beam and make sure they are secure.

TO USE

IMPORTANT - Your trailer is much wider than before and care is needed.

- You will need to cycle further out in the road.
- You will need to take corners wider.
- Your trailer will not fit through most doors.

If you are using this as part of some fantastical creation you will need to take responsibility for making sure it is safe and legal.

Have fun with the Wide Axle Beam!
